UNILUX wooden Meister windows & entry doors

UNILUX

One brand. One promise.

Modern wooden windows and wooden doors only share a name with their „ancestors“. Good carpentry and appearance alone is no longer enough, because energy efficiency, safety and functionality standards have increased dramatically to meet today's customer needs.

That's why all UNILUX Meister windows and wooden doors are development projects that demonstrate intelligence and complex engineering.

To be able to provide access to these masterpieces to more than just a select few customers UNILUX mass-produces them. That means it's possible for us to offer these unique wood products at a price that makes top quality affordable.

Where quality is at home – UNILUX

All good things come in sixes:

The UNILUX brand advantages

Brand advantage 1: Durability

Since we were founded, UNILUX has always used the highest-quality materials. Down to the finest detail: UNILUX wood products rely on high-quality coatings with UV blockers. The high-quality production and strict quality control guarantee that you will enjoy your UNILUX product for years.

Brand advantage 2: Freedom of design

Some things are a matter of taste. You can choose from three design variants (slanted, round, rustic), three refined woods (pine, larch, exotic woods), 189 colors and glazing tones, and several double-glazed and triple-glazed options. And let's not forget: a wide variety of window shapes (they don't have to be rectangular, after all) and muntins upon request in four different lines. Variety right from the factory.

Brand advantage 3: Energy efficiency

UNILUX's solid construction style not only guarantees durability, but also helps save energy. Every one of our Meister windows also has thermally isolated spacers between the panes of glass. That provides better insulation values, more comfort in the vicinity of the window and significantly less condensation in cold months. Heating costs can be further reduced through highly efficient triple glazing with a thickness of at least 40 mm (SuperThermo3, UltraThermo3, ThermoWhite3).

Brand advantage 4: Security

Sometimes a window's job is not just to keep out wind and rain, but also uninvited guests. That's why all UNILUX locking parts are made from high-quality materials. And each of our wood Meister windows has a mushroom pin in the latch even in the standard model. For maximum protection, we offer the SAFE line (optionally with A1 laminated safety glass, DIN-certified by the German National Authority on Fire Arms and Ammunition) and special alarm systems.

Brand advantage 5: Service

UNILUX works exclusively with our own qualified retailers. You can find them anywhere in Germany, right on site with their own local showrooms. Your regional UNILUX retailer will offer you detailed advice and assist you with your plans. They will also ensure prompt, correct installation and will be available at any time if you have any service-related needs.

Brand advantage 6: Brand quality

At UNILUX, there has always been one fast rule: Only products of uncompromising quality leave the factory. This made our company a recognized quality leader over the decades. Anyone who pays heed to the UNILUX logo can be certain of always receiving a „Made in Germany“-branded product.

Live the way you are – naturally individual:
UNILUX wooden Meister windows & entry doors

ADVANTAGES OF WOOD

Masterful design for pure comfort

Wood gives a feeling of wellbeing. It's a unique material that has lasted through all fashions and trends and has always inspired craftsmen and cabinetmakers to create beautiful works of art and craftsmanship. Us, too. With a wood product from UNILUX, you're always deciding on masterful design.

You can see it if you look closely. The details make the difference. For example, the fittings on the wood Meister window, which we recess for flush mounting. The consistent elimination of unnecessary corners and edges gives the window a charming appearance. And for the long term, too: The glazes contain special pigments that protect the wood from UV radiation. That means you'll be able to enjoy the masterful workmanship for years.

Wood as wood – Meister windows and house doors from UNILUX.

Wood Meister windows

The facets of style

No house is like any other. A renovated house from the early industrial era and the architecture of the 21st century can lie worlds apart. That's why UNILUX Meister windows have three different basic designs right from the start: Round, slanted and rustic. Your personal style can already be seen in the window contour itself.

Round

Well-rounded: With its soft, very rounded profile, the windows of this design line fit harmoniously into timeless architecture. A classic.

Slanted

Clear edges: This design concept was developed specifically for modern architecture, attractive for its cool, no-frills lines. Futuristic and stylish.

Rustic

Eternal values: With its powerful stepped visuals, this design line evokes the handbuilt windows of yesteryear. A natural for traditional construction and original facades in older houses.

UNILUX Meister window slanted

Recessed latches

Not just visually attractive, but also – thanks to the flat surface against the screw-mounted locking parts – from a security perspective, too. Not to mention easier to clean!

Wood, pure and simple

Solid and of the highest quality. UNILUX quality can be recognized by the fact that the furniture-grade finished wood is still attractive after many years.

Mushroom pins for added security

The mushroom-shaped locking device makes break-in attempts harder. Upgradable to 4-fold corner joints (SAFE package) and EN-verified Class 2 burglar resistance upon request.

Quality as a standard: the basic UNILUX advantages

You know it from buying cars: Some models seem cost-effective at first glance. But upon closer examination, you are incredulous at all the extras charged by the manufacturer.

Not with UNILUX. Our basic features in themselves are so extensive, that there is often no need for accessories. Every one of our wood Meister windows has the following standard equipment features:

Coating system

3 plus 2 equals long life for wood. UNILUX coats wood in three stages, then treats its surface in two stages. The electro-static coating and the sanding of the surface before coating and after the prime coat ensure excellent treatment and surface quality. And – thanks to laser testing – nearly knot-free.

Thermal insulation without compromises

Every UNILUX window meets today's high standards for energy efficiency. The stable frame catches the outside temperature – reducing heating needs.

Superior-quality wood

Not all woods are the same. To guarantee a consistently high quality of materials, we use our own experienced wood buyers, even in the farthest corners of the Earth. The same strict standards are applied during treatment – to ensure the wood has a long and healthy life.

Security

Even in standard models, every UNILUX wood Meister window has mushroom pins in its fittings, making it far harder to break into the window. All locking parts are also made from high-quality materials, providing added security.

Multi-layered wood bonding

Stability guaranteed. Multi-layered bonding equalizes stresses between the solid-wood layers and wood surface, thereby ensuring absolute torsional rigidity.

Recessed lock keepers

Impressive not only aesthetically, but also from a security perspective – due to being recessed compared to screwed-on locking parts. Not to mention easier to clean!

Extra perfect: the UNILUX optional advantages

Special circumstances require special solutions. That's why when it comes to security and thermal efficiency, UNILUX offers exclusive added value.

These additional benefits give you the certainty that your wood Meister window is top in its class. Perfection made by UNILUX.

Added security: SAFE

We offer special alarm systems and the SAFE line for maximum protection. SAFE II and SAFE III are an affordable but effective way of making burglars' lives harder.

From the four-corner security interlock – stable mushroom pins engage firmly into the locking parts in all four corners of a window sash – to the A1 security glass, UNILUX is ready with the right solution. For even higher standards, there is also the EN 1627ff-certified security of Resistance-Class 2

Solar gain: ThermoWhite3

A triple-glazed insulating glass that doesn't just stop at keeping the cold out. Thanks to a new, invisible Low-e coating, you can use the energy from the sun's rays more effectively.

More solar heat finds its way into the house. At the same time, this coating – together with the argon gas filling – ensures that the heat stays inside the house.

Extra warmth: Triple glazing

Three panes instead of two. The additional layer of glass provides even better thermal insulation and therefore even lower energy costs.

And since the pane itself has a thickness of 40 mm, it can also be efficiently equipped with noise protection.

Glass competence

Every UNILUX window has double-glazed insulating glass. Even this standard version achieves insulation values that are outstanding for wooden windows. But that's not enough for our engineers and developers. For anybody who wants to get serious about thermal insulation, UNILUX also offers triple-glazed insulating glass in a number of varieties.

You have the choice: for example, SuperThermo3, in which the additional layer of glass is barely noticeable in the price. Or UltraThermo3, which uses argon/krypton gas filling to obtain sensational insulation values. Or ThermoWhite3, which not only insulates, but actively makes use of the heat from incoming sunlight.

However you decide, every UNILUX window is an example of groundbreaking glass competence.

Coating in the ThermoWhite3

The special coating lets more sun and warmth in.

Argon gas filling

The heat, however, „ricochets“ around inside and remains in the house, thanks also to the argon gas filling.

The wide choice of colors

How many different tastes are there? When it comes to woods and colors, about 560. That's the number of combination options you have for your custom UNILUX wood Meister windows. Find out which wood harmonizes best with which color or wood glaze.

You have three highly robust woods to choose from (pine, larch, exotic wood), as well as 180 covering paint colors and 9 exclusive glazing tones for outstanding UV protection.

Select from pine, larch or exotic wood and from a large number of color and glazing variants.

Pine

You love wood

Wood is a living material. It's nice to be able to integrate it into one's living space. UNILUX wood Meister windows bring that liveliness into your living room.

Your world is colorful

Colors are an expression of personality and attitude towards life. Show off your taste by choosing from a range of colors that leaves nothing to be desired.

It's your choice

When it comes to wood colors, too, UNILUX always gives you the choice. Select from a wide variety of wood species, and make the most of the options for designing the wood's color scheme.

Endless variety of shapes

When choosing the shape of your wood Meister window, there are practically no limits. Triangular or round window? Sectional or semicircular arch? With or without muntins? Your specialized UNILUX trade partner will show you what's possible.

A handle on design

Design you can grab: Every UNILUX handle is not only a solid piece of workmanship „Made in Germany“, but also a visual gem. It is a tool that allows you to express your taste and style.

Shades and screens

There are different options for protection from intensive sunlight and curious eyes. Whether classical roller shutter, elegant Venetian blinds, or traditional aluminum shutters, UNILUX offers you your individual shade and screen solution. By the way, we have a few good recipes against insects, too.

Venetian blinds

Blindingly bright or pitch dark? Venetian blinds give you many more nuances than that. They can control incoming light on a continuous basis. The strips, with their adjustable tilt, allow you to determine exactly how much sunlight you let into your rooms. The Venetian blind also has an excellent visual appearance.

Roller shutter

When it comes to blocking out light, roller shutters have been the benchmark forever. No wonder they're preferred for use in bedrooms. And since the box appearance is the same as for our Venetian blinds, you can combine UNILUX roller shutters and Venetian blinds together harmoniously.

Shutters

There are things that trends and fashion simply can't change. Because their beauty is timeless. UNILUX shutters add value to any country home or city villa. And since they're made of aluminum, they have no problem fending off rain and storm. For life-long pleasure in comfortable aesthetics.

Insect protection

It's not just in bedrooms that insects are a bother. Biting flies and wasps can rob your enjoyment of the fresh air. So you can still air out without the worries, there are special clamping frames and rotating doors. You can easily mount these insect screens yourself. Comfort is so easy.

Every house facade is different. That's why UNILUX lets you select from different box variants when it comes to privacy protection.

For new construction we recommend plaster base variants, because roller shutters or Venetian blinds are then integrated into the external stucco. There is no break in the masonry in this case – no thermal bridge, meaning less energy consumption.

Good to know: For boxes with exterior modification, you can put up wallpaper inside with no worries – the visually bothersome modification cover disappears.

Contour roller shutter

Reduced design through edged visuals

Round roller shutter

Round visuals, specifically eye-catching

Plaster support variants

Behind the stucco – nearly invisible.

Variety of bars and dividers

Divided lights are the icing on the cake when it comes to a window's appearance. Our range covers four different lines, from true divided and simulated divided lites to the astragal and georgian bar designs.

Lockability

Not every window needs to be opened, especially when there are small children around. That's why most of our handles come with a lock button, and are also available as lockable variants. Just in case.

Sunshades and more

At UNILUX, we have storybook shutters, first-class roller shutters and insect screens that are either built into the roller shutter box or act as a separate component.

Each one a masterpiece

The world of UNILUX wooden entry doors

LifeLine: The uncompromising

Each and every one of our wooden entry doors is a paragon of strength and density. No storm, no cold front can counter them. But LifeLine goes a step further: Thanks to the interplay of additional insulating measures, heat penetration is reduced to the absolute minimum.

HighLine: The showpieces

Our motto: A wooden entry door is an investment that will last for decades. We do a lot to support that. The cross-section of a HighLine door shows the sheer meticulous attention to detail UNILUX put into the development of this model series. The combination of high-quality materials and refined engineering is your guarantee for a door that will demonstrate its quality every day.

JuniorLine: The little big things

Small in price, big in performance – that's the idea behind the models in the JuniorLine. Door after door, they show that brand quality can be affordable. From their top-class wood to flawless work to the variety of colors, glass, and designs. Why settle for less if you can have a UNILUX wooden door?

Live the way you are – naturally individual:
UNILUX wooden Meister windows & entry doors

UNILUX LifeLine ENTRY DOORS

Uncompromising.
Passive house suitable.
Noble.

To make a wooden entry door suitable for passive houses, the engineers and developers at UNILUX work down the smallest details. A combination of high-quality materials and technically demanding design ensures outstanding insulation values. You won't just feel the difference – you can also see it: in your energy bills.

Hightech that looks great. Every LifeLine model doesn't just set standards when it comes to thermal insulation but also in terms of aesthetics.

Unbeatable in every way: LifeLine.

UNILUX HighLine-Harmony HOUSE DOORS

Timeless.
Balanced.
Personal.

For a planner a house door may only represent a functional connection between inside and outside. But it's actually a lot more. It's the business card for your house. The visible access to your individual, unique home. That's why it should reflect your individuality, too, and show the world outside who you are.

HighLine-Harmony is a virtuoso when playing with geometric forms. Because this style blends aesthetics with dynamics, it gives timeless architecture a powerful individual note.

Set accents: HighLine-Harmony.

UNILUX HighLine-Trend HOUSE DOORS

Purist.
Clear.
Striking.

Perhaps the most important basic rule of good design: Less is more. For forms to be able to have an effect, they cannot be overloaded. It is only when we eliminate superfluous embellishment that the essence of an object can be seen clearly. And a nice side effect is this: You simply can't get tired of looking at clear lines.

HighLine-Trend stands for a language of form that's the latest thing. A no-compromise aesthetic demand makes this style a natural for sophisticated modern architecture.

Reduced to the essential: HighLine-Trend.

Live the way you are – naturally individual:
UNILUX wooden Meister windows & entry doors

Just like you

Your dream door from UNILUX

UNILUX doesn't make you go by the book. Every house door is a unique production in which you determine not only the model, size, wood, and color, but also all the details.

Special light cut-outs, optional sidelights and transoms allow you to set individual accents. Even the selection of the glass and the handle expresses your entirely personal, unique taste.

Thanks to this wide variety of options every UNILUX door has individuality built in at the factory.

Design freedom in size and shape

Seated as though it were cast there

How large should a house door be? On which side must it open? Is one leaf better or two? And how much daylight should the door let in? These are questions that everybody will answer differently.

That is why you not only get our mass-produced UNILUX house doors in your personal length and width preferences, but also in the fittings of your choice. For example, with one or two flanking side-lights and transoms. Elements that highlight your door and set additional design accents.

Let there be light

Entrances don't have to be pitch-dark. With light cut-outs in your house door, glazed sidelights and transoms let brightness into your hallway even without lamps.

That makes your entry more livable. Light, home-delivered by nature.

Light cut-outs

Rectangle or porthole? Symmetric panels or sweeping curves? With the light cut-outs, too, you have all the options you're used to getting from UNILUX.

Variety for more individuality.

More than bright

Not all glass is the same. Think for a moment how versatile this familiar material can be. From simple ornamental glasses to striking designer glasses.

A handle on design

Curled brass or straight-forward stainless steel? Historical classic or minimalistic modern? Every UNILUX handle isn't just a rock-solid piece of workmanship, it's also a visual gem expressing your taste and your style.

Base

For many models you can get an optional robust stainless steel guard.

Freedom of design in terms of material and color

Life is colorful

Every UNILUX door matches your house not only in terms of architecture, but also color. The selection of colors and color variants leaves nothing to be desired.

Ask your UNILUX retailer for color fans. That gives you confidence that your favorite red (or favorite gray, or favorite blue etc.) will work on your house door.

And you can select from 15 semitransparent glazes and about 200 covering RAL color paints. For the wood itself you can choose between the robust species of pine, larch and exotic wood.

This fits your entry door harmoniously into the architecture of your house.

Choose from the following wood species: Pine, larch and exotic wood, as well as 20 glazing tones.

Live the way you are – naturally individual:
UNILUX wooden Meister windows & entry doors

Glass-clear style

Glass and glass variants

Glass is a special material that lends every door its particular individual tone. We offer house door glass that could hardly come in more variety – and we have individual design suggestions for every door. This permits you to express your personal style even when selecting the glass.

UNILUX glasses are attractive because they let natural light in while still leaving the view of strangers outside. Each of our ornamental and design glasses is proof that beauty and functionality aren't mutually exclusive.

UNILUX – glass can be so unique.

Caution: temptation!

This sample case has it all. It can show you just what options you have when it comes to glass. It doesn't always have to be "just smooth". Ornamental and design glasses bring structure and elan to a familiar material.

Ask your local UNILUX retailer. He will be happy to show you the UNILUX glass sample case.

A handle on aesthetics

Handles and handle variants

A door handle has to be tough – not everyone puts on their silk gloves to handle it. That's why robustness is the basic requirement for a good handle. But not only material resistance is important to us, but also the visual.

**A UNILUX door handle looks inviting at all times.
It complements the architecture and is the dot on the
I of a representative door.**

Good feeling in the hand, attractive appearance – door handles from UNILUX.

Exclusive handle selection for the UNILUX LifeLine program

Not all handles can be harmoniously combined with all doors.
This page shows the selection of handles for the UNILUX LifeLine program.
Ask your UNILUX retail partner which combinations are possible.

Protection and security

Not popular with burglars

Burglars are under time pressure. The more obstacles you can put in their way, the quicker they'll give up. That's why at UNILUX we don't just think about design and comfort, but also about security systems and locks. And these – as we demonstrate in the serious approach we take every day – aren't something you should save on.

Good to know: Even in their standard version, UNILUX house doors have effective security mechanisms. We also offer add-ons that take these already-high mass-produced security standards and reinforce them even more.

This is UNILUX's contribution to making sure that unwelcome guests don't even get in the door.

Live the way you are – naturally individual:

UNILUX wooden Meister windows & entry doors

Massive door frame with continuous deadbolt

When it comes to security, a lot actually helps a lot. The more massive a door is, the more resistance it has against an attacker. With thicknesses of up to 79 millimeters, our doors provide robust natural protection.

All our models have a continuous metal deadbolt in the frame. In practice this means: Since the locking generally engages firmly in the locking parts, the potential criminal has to break the entire bar out of the decorative frame – and that's a massive amount of extra work. This obstacle significantly raises the bar for burglars.

Three- or four-point interlock and automatic locking

Even in the standard models, UNILUX house doors have an effective three-point interlock with two self-locking bolts. When the door is pulled shut, these lock it securely in two places – top and bottom – automatically. The door can be opened quite normally with the door handle or key.

Door catch

More effective and elegant than door chains.

The optional door catch provides additional locking from inside and also acts as a stop when the door is only opened a crack. In case of an undesired visitor, it therefore makes it impossible to get a foot between the door and the frame.

Secured hinge bolts

All UNILUX house door models have two secured hinge bolts installed at the factory. This makes forcible entry by levering out the door massively difficult.

Safety glass

Thanks to a specially developed highly crack-resistant polycarbonate film, the optional safety glass stays closed even when the glass is broken – good for you, bad for potential break-ins. By the way, the projectile-resistant A1 safety glass from UNILUX has been certified by the German National Authority on Fire Arms and Ammunition.
